Art Unit: 1712

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Burton Amernick on 6/14/06.

The application has been amended as follows:

In claim 13, please replace formula (1) with the following formula:

$-\{Si(R^1)_{2-b}(Y)_bO\}_m-Si(R^2)_{3-a}(Y)_a$  (1)

Also, on page 1, in the reference to related applications, please replace "09/122,876" with "09/122,896, now 6,274,688".

In the abstract, please delete the last sentence, starting with "Curable compositions...".

This corrects an obvious typographical error in claim 13 by replacing Si for S<sub>1</sub>. It also updates the status of the parent application. Applicants' Declaration refers to the proper parent application. The abstract has been limited to one paragraph.

2. The following is an examiner's statement of reasons for allowance: As noted in the previous office action, these claims are allowable over the prior art. As an aside the Examiner notes that the references cited in the IDS filed 11/29/05 have been considered. She draws particular attention to Yamanaka et al. In Example 22 patentees react a vinyl terminated polymer (which vinyl group was formed from 1,9 decadiene) with a hydrosilyl functional curing agent. This differs from that claimed in that it does not specifically form a terminal group (1) as claimed and also it results in a cured, rather than a crosslinkable, product. This reference fails to teach or render obvious the crosslinking silyl group (1) required by the instant claims. In fact, one would have no motivation to include such crosslinking groups on the terminal vinyl groups in Yamanaka et al. since, as shown by Example 22, these vinyl terminated polymers are already crosslinkable. The prior art provides no motivation to change the crosslinking group.
